1 Introduction

Since 2006, Business Stream has provided water and sewerage services to businesses across Scotland. A wholly-owned subsidiary of Scottish Water, Business Stream has been formed as an arms-length company with its own board and independent management team. Our goal is to provide a first-class service for business customers.

Under the Water Services etc. (Scotland) Act 2005, Scottish Water had to split its operation into wholesale (Scottish Water) and retail (Business Stream) units. Although ostensibly remaining a part of Scottish Water, Business Stream is working completely independently of its parent company in order to ensure fair and transparent retail practice under the rules of the new competitive marketplace for business customers.

Scottish Water continues to own and operate the treatment works and networks that provide you with water and sewerage services, and Business Stream purchases these services from Scottish Water (the wholesaler).

The Business Stream website can be found at www.business-stream.co.uk. You can reach our customer service centre by telephone on 0845 602 8855 or by email at customer.service@business-stream.co.uk

2 Our customers

In the retail market that opened in Scotland on 1 April 2008, all non-domestic properties are able to receive their water and waste water services from Business Stream. All domestic properties continue to receive services from Scottish Water, which is normally paid for as part of their council tax bill.

This means that, where there is a domestic building with a separate water supply but within the boundary of your business property, the domestic building will be treated as if it were a completely separate property and will be charged for water and waste water services as part of the council tax bill.

However, if your business property also contains a domestic element on the same water supply, the property as a whole will be charged for services by Business Stream. This means that you should still pay council taxes for the domestic property, but you should ensure that your bill does **not** include charges for water and waste water services, because you'll be billed for this directly from us.

If you have any questions about who should bill you for your services, please call our customer service team on 0845 602 8855.

3 Our charges

The Water Industry Commission for Scotland (the Commission) sets maximum tariffs for default services offered by licensed water and sewerage service providers. None of the charges in this document exceed the allowable maximum tariff. The charges in this statement apply to all properties unless otherwise stipulated by the Commission, and will remain effective until amended or replaced by a subsequent charging statement.

There are three basic charge elements that apply to most sites and make up your bill – water, waste water and drainage. If your property has a water meter, your water and waste water charges are based on usage recorded by the meter. If you don't have a water meter, your charges are based on the rateable value (RV) of the property. Drainage charges for all customers are based on the RV of the property.

All properties with these services are charged a fixed rate and a volumetric rate for each element of their usage, in addition to property and roads drainage. This makes six bill elements in total:

1. a fixed charge for water
2. a volumetric charge for water
3. a fixed charge for waste water
4. a volumetric charge for waste water
5. property drainage
6. roads drainage

How you are charged for water and waste water depends on whether your property has a water meter or not, but property and roads drainage are charged based on the rateable value (RV) of the property for all customers.

Fixed and RV-based charges apply for the full financial year. Where the period of liability is less than the full year, charges will be apportioned on a daily basis.

In addition to standard ongoing services, we also provide additional services that happen on a more ad-hoc basis, ie disconnections, metering services, building water and new water and sewerage connections. The charges for these services are also included in this document.

4 How RV charging works

For most customers, the RV used for any un-metered water and waste water charging, as well as for property and roads drainage, will be the one assigned in March 2000, unless:

- the property has been built since then
- the property has been re-valued following modifications or extensions
- the property has been brought into charge for the first time after March 2000
- the March 2000 RV is no longer available

If, because of one of the reasons above, it's not appropriate to bill on the March 2000 RV, charges will be applied based on the RV held by the local Council Regional Assessors in March 2005.

If you do not think that your un-metered RV charges for water and waste water reflect your actual usage, from 1 April 2009, you can apply for a reassessment. Our online guide explains the process. Visit our online guide at www.business-stream.co.uk/reassessment-guide for more information.

5 Water charges

5.1 Metered water

If your property has a meter, the fixed element of your water charges will be based on the size of your meter, and the volumetric rate will apply per cubic metre of water that you use ($1\text{m}^3 = 1,000$ litres).

5.1.1 Fixed water charges for metered supplies

Meter size	Fixed charge (per year)
20mm or smaller	£133.39
25-30mm	£396
40mm	£1,122
50-63mm	£2,495
80mm	£6,497
100mm	£15,717
150mm	£44,223
200mm	£96,383
250mm	£174,624
300mm	£282,316

If the exact size of the meter at your property is not listed here, then the fixed charge applied will be that listed for the next size down. For example, if the existing meter at your property is 43mm, then the fixed charge applied will be for that of a 40mm meter.

Your meter size may be reduced for charging purposes if your property has a fire fighting system and you have a fire tariff agreement. In this situation, Scottish Water will assess the appropriate meter size for charging purposes.

Where two or more metered water supplies feed the same property and are owned by the same customer, we will charge you a fixed charge for each supply separately.

5.1.2 Volumetric water charges for metered supplies

The volumetric charge for water is based on the usage recorded by the water meter.

For meters with a size up to and including 20mm, the first 25m^3 of water consumed will be charged at £2.0013 per m^3 , and all subsequent usage will be charged £0.7506 per m^3 , until you get up to $100,000\text{m}^3$ at a single site.

For meters greater than 20mm, consumption will be charged £0.7506 per m^3 , until you get up to $100,000\text{m}^3$ at a single site. If you reach more than $100,000\text{m}^3$ total at a single site, you'll be charged £0.6421 per m^3 . Once you reach $250,000\text{m}^3$, you will be charged £0.6186 per m^3 .

Customers are no longer able to create new large user volume agreements (LUVAs), but for those on existing LUVAs, the volumetric charges listed below apply (for a single site).

Consumption	Charge per m^3
0-100,000 m^3	£0.7506
100,001-250,000 m^3	£0.5397

250,001-1,000,000m ³	£0.4775
1,000,001m ³ and over	£0.4586

Metered charges are applied to every property that receives a metered water supply, where the installation, type and size of meter have been approved by Scottish Water. If Scottish Water has not approved the installation, type and size of your meter, you will continue to be charged on an un-metered basis.

5.2 Un-metered water

If your property does not have a meter, your fixed and volumetric water charges are based on the RV of your property.

Fixed charge	Charge per £ of RV
£147.43	£0.02832

6 Waste water

Just like water, waste water is charged at fixed rate and a volumetric rate. Again, how you are charged for each of these elements depends on whether your property is metered or not.

6.1 Metered waste water

If your property has a water meter, the fixed element of your charge will be based on the size of your meter, and the volumetric rate will apply per cubic metre of water that you use ($1\text{m}^3 = 1,000$ litres)

6.1.1 Fixed waste water charges for metered supplies

Meter size	Fixed charge (per year)
20mm or smaller	£124.48
25-30mm	£401
40mm	£1,137
50-63mm	£2,528
80mm	£6,369
100mm	£15,509
150mm	£37,153

If the exact size of the meter at your property is not listed here, then the fixed charge applied will be that listed for the next size down. For example, if the existing meter at your property is 43mm, then the fixed charge applied will be for that of a 40mm meter.

Your meter size may be reduced for charging purposes if you are a trade effluent customer, in which case your waste water fixed charge will be based on the meter size that would be required to provide your water for non-industrial use. In this situation, Scottish Water will assess the appropriate meter size for charging purposes. Please see section 9 for more information about trade effluent charges.

6.1.2 Volumetric waste water charges for metered supplies

Since not all of the water you use comes back to the public sewerage system, your waste water volume is assumed to be only 95% of your water volume, unless you are a trade effluent customer. Therefore, waste water charges are based on 95% of the water charges above. If you think that significantly less than 95% of the water you use ends up in the public sewerage system, please contact our customer service centre on 0845 602 8855 to discuss the situation further.

For meters with a size up to and including 20mm, for the first 23.75m^3 of waste water, your volumetric charge is £2.1629 per m^3 . Any further waste water is charged £1.3006 per m^3 .

For meters greater than 20mm, you will be charged £1.3006 per m^3 for the waste water volumetric charge.

6.2 Un-metered waste water

If your property does not have a meter, your fixed and volumetric charges are based on the RV of your property.

Fixed charge	Volumetric charge (per £ of RV)
£160.88	£0.04592

7 Changes to your bill from full business metering

In 2004, the Scottish Government and the Water Industry Commission for Scotland decided to change the way businesses were charged for their water to ensure a fairer system. Meters have been fitted free of charge in thousands of businesses up and down the country as part of this full business metering project. 1 April 2009 saw the end of the meter installations and the start of metered charges for these customers.

In line with Scottish Government policy and to help businesses get used to this way of charging, our industry regulator has decided to phase in metered billing over four years. If you've received a meter as part of this project, the percentage of charges that you'll see on your bills each year is set out in the table below:

	April 2008 – March 2009	April 2009 – March 2010	April 2010 – March 2011	April 2011 onwards
Metered charges	0%	33%	67%	100%
Un-metered charges	100%	67%	33%	0%

So from 1 April 2009, we billed you for 33% of your metered usage, and 67% of your un-metered charges. From 1 April 2010, we will bill you for 67% of your metered usage, and 33% of your un-metered charges.

These percentages will be the same for every customer on the project. Since this was a project determined by the Scottish Government and the Water Industry Commission for Scotland, all water and waste water retailers in Scotland will be required to implement the phasing the same way. We cannot allow any customers to switch to metered charges outwith the phasing detailed in the above table.

You can find more information about the project on our website at www.business-stream.co.uk/phased-bills, as well as more details about the phasing, answers to key questions and a virtual calculator to help you work out how much your new charges will be.

8 Drainage

Property drainage is the term that is used for rainwater that drains into the public sewerage system from within the boundary of your property, such as roofs, private car parks and private roads.

Roads drainage is the term used for rainwater that drains into the public sewerage system from public roads and footpaths.

Property and roads drainage are applied in relation to the RV of your property. There is also a property drainage charge that is based on the area of the property that is connected to the public sewerage system, which is calculated per square metre (m²) of the property area. However, the area-based property drainage charge is only applicable at properties that qualified for this charge in 2005/06.

8.1 Property drainage

If rainwater drains to the public sewerage system from your property, then property drainage charges will apply. These charges are based on the RV of the property.

If ANY property drainage goes to the public sewerage system (pounds/£RV/annum)	£0.02465
If NO property drainage goes to the public sewerage system (pounds/£RV/annum)	No charge
Properties where area-based property drainage charges applied in 2005/06 (ounds/m ²)	£0.35826

8.2 Roads drainage

Roads drainage charges apply to all properties that have a connection to the public sewerage system for either waste water or for property drainage. This charge will be based on the RV of the property.

If property has ANY connection to the public sewerage system (pounds/£RV/annum)	£0.01583
If property has NO connection to the public sewerage system (pounds/£RV/annum)	No charge

9 Trade effluent

Waste water from industrial processes is called trade effluent, and is charged at the trade effluent rate, rather than the standard rate for waste water. Trade effluent charges are payable in respect of the control, reception, treatment and disposal of trade effluent from properties received into a public sewer under a statutory consent or agreement of Scottish Water.

References to foul sewage and sludge refer to those received at Scottish Water's waste water treatment works.

Where effluent is discharged from your property that does not fulfil the statutory criteria for the definition of a trade property, then Scottish Water will, at their discretion, assess the proportion of effluent that shall be charged as trade effluent. Where Scottish Water has issued a 'letter of authorisation', trade effluent charges will not apply, but will be included in the waste water charge.

Your trade effluent charge will be the greater of:

- a minimum charge of £171.64 per annum
- the sum of the availability charge (which is charged at a daily rate) and the operating charge (which is charged at a volumetric rate) both calculated as detailed below

Trade effluent is zero rated for VAT purposes. If you are in any doubt concerning the application of VAT, please contact our trade effluent team on 0845 602 8855.

9.1 Availability charge

The availability charge reflects your waste water system capacity requirements and is charged on a daily basis. This charge is calculated according to the charging parameters for chargeable daily volumes (CDV), total suspended solids load (TSSl) and settled biochemical oxygen demand load (sBODl) of the effluent discharged from your property.

$$\text{Availability charge} = [CDV \times (Ra + Va)] + (Ba \times sBODl) + (Sa \times TSSl)$$

Type of charge	Charge per m ³ per day
Ra (Reception charge)	£0.087187
Va (Volumetric/Primary charge)	£0.058051
Ba (Biological capacity charge)	£0.221515
Sa (Sludge capacity charge)	£0.189870

Where discharges occur during regularly defined periods of the year and are constrained by the natural and seasonal availability of raw products, the availability charge will be calculated on a seasonal basis from the date a seasonal consent comes into effect issued by Scottish Water (please see section 9.6 for further details).

9.2 Operating charge

The operating charge is calculated according to the nature, composition and volume of the effluent discharged from your property. This charge is calculated from:

- actual volume discharged (AVD)
- fixed strength (settled chemical oxygen demand) of the effluent (O_t)
- the settled chemical oxygen demand of the foul sewage (O_s)
- fixed strength (settleable solids) of the effluent (S_t)
- total suspended solids in the foul sewage (S_s)

$$\text{Operating charge} = AVD \times \left[R_o + V_o + \left(B_o \times \frac{O_t}{O_s} \right) + \left(S_o \times \frac{S_t}{S_s} \right) \right]$$

Type of charge	Charge per m ³
R _o (Reception charge)	£0.140547
V _o (Volumetric/Primary charge)	£0.093735
B _o (Secondary treatment charge)	£0.125271
S _o (Sludge treatment charge)	£0.076603

9.3 Table of standard strength values

O _s (settled chemical oxygen demand) of the foul sewerage	350 milligrams per litre
S _s (suspended solids) of the foul sewerage	250 milligrams per litre

O_t and S_t are derived from analysis of settled samples, or according to the assessed strength of the effluent, or any standard strength of the relevant type of trade effluent.

O_t and S_t are not defined in trade effluent consents. They are based for each fiscal year on the analytical results from the previous calendar year's sampling activity, carried out by Scottish Water.

9.4 Temporary consents for trade effluent discharge

Temporary trade effluent consents are issued for short term discharges of effluent, typically from site remediation or construction activities, of no longer than three months. A temporary consent will be valid for six months, after which time it will automatically terminate. The relevant category of discharge will appear on your first bill.

Category of discharge	Charge per consent
Low strength/risk	£166.66
Medium strength/risk	£333.42
High strength/risk	£555.63

9.5 Application of the trade effluent charge

The following conditions will apply with regard to the application of the trade effluent charge:

- Where preliminary treatment, biological oxidation or sludge treatment is not normally provided or is provided only in part for the trade effluent, the whole or due proportion of the respective charging component V, B or S is omitted as follows:

	PTI	SSI	BTI
Sub-primary	0	0	0
Primary	1	2/3	0
Secondary	1	1	1

- Each of the charging components, and the due proportion under B and S, are ascertained by Scottish Water on an annual basis.

PTI Preliminary treatment indicator – applies to Va and Vo components within the availability and operating charges formulas.

BTI Biological treatment indicator – applies to Ba and Bo components within the availability and operating charges formulas.

SSI Sewage sludge indicator – applies to Sa and So components within the availability and operating charges formulas.

9.6 Seasonal discharges

A seasonal discharge is defined as one that occurs during regular defined periods of the year and is constrained by the natural and seasonal availability of raw products. In these circumstances, the volume, BOD and TSSI factors used in the calculation of the Availability Charge will be as shown below:

$$[(\text{Volume 1} \times \text{length of period 1}) + (\text{Volume 2} \times \text{length of period 2}) + (\text{Volume 3} \times \text{length of period 3}) + (\text{Volume 4} \times \text{length of period 4})]/12$$

$$[(\text{BOD 1} \times \text{length of period 1}) + (\text{BOD 2} \times \text{length of period 2}) + (\text{BOD 3} \times \text{length of period 3}) + (\text{BOD 4} \times \text{length of period 4})]/12$$

$$[(\text{TSSI 1} \times \text{length of period 1}) + (\text{TSSI 2} \times \text{length of period 2}) + (\text{TSSI 3} \times \text{length of period 3}) + (\text{TSSI 4} \times \text{length of period 4})]/12$$

A 20% premium will apply will apply to the availability charge for registered seasonal dischargers.

The volume, the sBODI and the TSSI for each period and the duration of each period will be specified in the consent. There will be a maximum of four periods definable, with no period being shorter than one month, and a year will comprise 12 months (ie all months are equal in length in this calculation).

The consent document will show the availability parameters applying in the individually consented periods but not the calculated availability parameters.

The full value of the availability charges for the period the consent is in operation will be charged where a discharge point with a seasonal discharge consent is either discontinued or terminated.

9.7 Operational requirements of Scottish Water (the wholesaler)

The frequency of effluent sampling will vary depending on the risk that any discharge poses to Scottish Water staff and facilities. When additional sampling is necessary over and above the pre-determined sampling programme (for example as a result of

non-compliant discharge), then Scottish Water may recover any direct costs associated with this additional sampling directly from you.

The Scottish Environment Protection Agency (SEPA) monitors discharges from Scottish Water treatment works and their charges reflect the degree of monitoring required. Where it can clearly be shown that the SEPA charge has been increased due to the activities of a particular business, then the additional cost may be recovered by Scottish Water directly from you.

If your business, or your business' effluent, can be shown to have caused events that resulted in additional costs to Scottish Water (for example, a blocked or damaged sewer) then Scottish Water may recover these costs directly from you.

10 Field troughs, drinking bowls and outside taps

For field troughs and drinking bowls, charges apply to un-metered connections and apply per trough, irrespective of whether the field is in grass or crop. The charge will apply for each trough/drinking bowl and varies depending on the type of property.

Charges for outside taps apply to all external taps at non-household properties (including farms) where the property has no water meter and/or no RV. These charges also vary depending on the type of property.

A reduced charge for crofts and registered small holdings will be applied following the provision of confirmation of registered croft status under croft legislation, or by providing your Small Holding Registration Number, granted by the Scottish Government.

Type of properties	£ per year
Crofts and registered small holdings	£90.63
Other properties	£139.05

11 Disconnections

There are two types of disconnections that we offer – temporary and permanent. You can request and pay for either type to be carried out at your property.

We will also temporarily disconnect your supply if you fail to pay your bills. We will reconnect the supply once all outstanding bills have been paid, including the applicable disconnection and reconnection charges.

11.1 Disconnection surveys

The cost for disconnecting your supply – whether temporarily or permanently – is based on whether alterations to your pipework are needed. To establish what work is required, we must first carry out a survey. If you need the survey to be done out-of-hours, ie outwith Monday to Friday, 8am to 6pm, the survey charges increase.

Activity	Charge	Abortive visit charge
The first hour of an in-hours standard disconnection survey	£81.67	£68.10
For each hour thereafter of an in-hours standard survey	£54.44	
The first hour of an out-of-hours standard disconnection survey	£109.22	£91.06
For each hour thereafter of an out-of-hours standard survey	£72.67	

If you can commit to going through with the disconnection before the survey is even carried out, and the survey shows that a standard disconnection is possible, we'll reduce your charges by the amounts below.

In-hours advanced commitment standard disconnection	-£54.44
Out-of-hours advanced commitment standard disconnection	-£72.67

11.2 Temporary disconnection

A temporary disconnection should not last more than three months. Disconnections lasting longer than three months will be classed as permanent disconnections and will be charged as such. The fixed charges for water and waste water will continue to apply for each period of temporary disconnection (see sections 5.1.1 and 6.1.1).

Activity	Charge	Abortive visit charge
In hours temporary disconnection	£81.67 per hour	£68.10
Out-of-hours temporary disconnection	£109.22 per hour	£91.06
Temporary disconnection requiring pipe work alteration	Based on actual cost	Based on one hour 15 minutes

The following charges will be applied to your account if we conduct a survey to disconnect your supply for non-payment of your bills.

Activity	Charge	Abortive visit charge
The first hour of an in-hours disconnection survey	£163.22	£136.19
For each hour thereafter of an in-hours survey	£108.88	
The first hour of an out-of-hours disconnection survey	£218.32	£182
For each hour thereafter of an out-of-hours survey	£145.44	
Disconnection requiring pipe work alteration	Based on actual cost	Based on one hour 15 minutes

The following charges will be applied to your account if the supply is disconnected for non-payment of your bills.

Activity	Charge	Abortive visit charge
In-hours disconnection	£163.22 per hour	£136.19
Out-of-hours disconnection	£218.32 per hour	£182
Disconnection requiring pipe work alteration	Based on actual cost	Based on one hour 15 minutes

The following charges will be applied to your account for the reconnection of your supply following a temporary disconnection.

Activity	Charge	Abortive visit charge
In-hours reconnection	£81.65 per hour	£68.10
Out-of-hours reconnection	£109.20 per hour	£91.06
Reconnection requiring pipe work alteration	Based on actual cost	Based on one hour 15 minutes

11.3 Permanent disconnection

If you ask us to permanently disconnect your water supply, you will be charged based upon the actual cost of providing this service, but we ask that you send a £500+VAT deposit in with your application. Any costs will be deducted from this amount – any difference will be refunded and any further costs will be invoiced upon completion of the work. Abortive visit charges will also apply. These will be based on 1 hour 15 minutes of reasonable resources.

Inspection fee associated with permanent disconnections may also apply. If required, you will always be advised in advance. Where appropriate these are:

Activity	Charge	Abortive visit charge
The first hour of an in-hours standard inspection	£81.65 per hour	£68.10

For each hour thereafter of an in-hours standard inspection	£54.43	
The first hour of an out-of-hours standard inspection	£109.20 per hour	£91.06
For each hour thereafter of an out-of-hours standard inspection	£72.69	
All other non-standard inspections	Reasonable costs	Based on 1 hour 15 minutes

12 Metering services

Metering your supply allows us to bill you based on your actual consumption and also allows you to monitor and manage your usage. Our metering services will help you get a meter installed, keep it working properly and make sure it's the right size for your property.

If you have any questions about meters that we haven't answered here, please call our customer service centre on 0845 602 8855 or email customer.service@business-stream.co.uk

12.1 Meter installation

If you ask for a meter to be installed at your un-metered property, then we will request the service from Scottish Water and charge you based on the meter installation standard charges shown below.

Meters will only be installed where practicable, so we must first carry out a survey at your property to make sure that installation is possible. When this is not possible, we will explain the circumstances behind Scottish Water's decision. If you need the survey to be done out-of-hours, ie outwith 8am to 6pm Monday to Friday, the survey charges increase.

Activity	Charge	Abortive visit charge
The first hour of an in-hours meter installation survey	£81.67	£68.10
For each hour thereafter of an in-hours meter installation survey	£54.44	
The first hour of an out-of-hours meter installation survey	£109.22	£91.06
For each hour thereafter of an out-of-hours meter installation survey	£72.67	
Meter installation surveys requiring additional resources	reasonable costs	Based on one hour 15 minutes

If it is possible to install your meter, but the installation requires one or more of the following, you will be charged based on the actual cost of undertaking the installation:

- separating the water supply pipe to the your property, if it also supplies another property
- substantial plumbing work
- installing more meters, for example because the property has more than one water supply
- installing a meter elsewhere in the property, other than in Scottish Water's preferred location

Wherever possible, we will notify you in advance of these charges. In all other cases, the charges below apply.

Description of work	Charge per meter
15mm internal fit	£281.40
20mm internal fit	£294.79
25mm internal fit	£339.46
30mm internal fit	£406.45
40mm internal fit	£692.33
50mm internal fit	£891.09
80mm internal fit	£1,007.22
100mm internal fit	£1,214.92
150mm internal fit	£1,444.96
15mm external fit in existing chamber (no dig-up)	£442.19
20mm external fit in existing chamber (no dig-up)	£455.59
25mm external fit in existing chamber (no dig-up)	£500.27
30mm external fit in existing chamber (no dig-up)	£567.26
40mm external fit in existing chamber (no dig-up)	£605.23
50mm external fit in existing chamber (no dig-up)	£1,130.06
80mm external fit in existing chamber (no dig-up)	£1,246.18
100mm external fit in existing chamber (no dig-up)	£1,453.89
150mm external fit in existing chamber (no dig-up)	£1,686.15
15mm external fit, excavate & resurface in verge/footpath	£911.19
20mm external fit, excavate & resurface in verge/footpath	£924.59
25mm external fit, excavate & resurface in verge/footpath	£940.22
30mm external fit, excavate & resurface in verge/footpath	£969.26
40mm external fit, excavate & resurface in verge/footpath	£1,036.25
50mm external fit, excavate & resurface in verge/footpath	£1,395.82
80mm external fit, excavate & resurface in verge/footpath	£1,511.95
100mm external fit, excavate & resurface in verge/footpath	£1,719.65
150mm external fit, excavate & resurface in verge/footpath	£1,949.68
15mm external fit, excavate & resurface road	£1,221.62
20mm external fit, excavate & resurface road	£1,235.02
25mm external fit, excavate & resurface road	£1,308.51
30mm external fit, excavate & resurface road	£1,346.68
40mm external fit, excavate & resurface road	£1,384.64
50mm external fit, excavate & resurface road	£1,583.42
80mm external fit, excavate & resurface road	£1,699.55
100mm external fit, excavate & resurface road	£1,907.25
150mm external fit, excavate & resurface road	£2,137.28
15mm external fit, dig-up & install ebco box + MSM meter in verge	£632.03
20mm external fit, dig-up & install ebco box + MSM meter in verge	£636.50
25mm external fit, dig-up & install ebco box + MSM meter in verge	£676.70
15mm external fit, dig-up & install ebco box + MSM meter in road	£902.26
20mm external fit, dig-up & install ebco box + MSM meter in road	£906.72
25mm external fit, dig-up & install ebco box + MSM meter in road	£946.93

12.2 Changing meter sizes

If you would like to change the size of the meter that supplies your property, then the charge payable will be based upon the cost of carrying out the work. Wherever possible, we will notify you in advance of these charges.

12.3 Replacing a damaged meter

It is your responsibility to make sure that your meter is protected and kept in good condition. If your meter is damaged by frost or by someone other than a representative of Business Stream or Scottish Water, then a charge will be payable for repairing the meter. Wherever possible, we will notify you in advance of these charges, which will be based on the cost of the repairs.

We may also charge you for the volume of water that we estimate would have passed through the damaged meter during the time that it was damaged.

12.4 Meter accuracy test

If you believe that your water meter is not registering correctly, then we can arrange for it to be tested by Scottish Water. If the meter is found to be recording your usage accurately (within 5%), you will be charged for the testing, as per below. If it has been recording your usage inaccurately, this will be corrected at no cost to you.

Activity	Charge	Abortive visit charge
Meter accuracy test for $\frac{3}{4}$ meter found to be accurate and 50mm in diameter or smaller	£461.66	Based on one hour 15 minutes
Meter accuracy test for $\frac{3}{4}$ meter found to be accurate and larger than 50mm in diameter	Reasonable costs	Based on one hour 15 minutes

13 New connections

Business Stream will process applications for new connections to the public network for all commercial developments, but Scottish Water will process all non-commercial applications directly.

There is a minimum charge of £74+VAT that applies to all new connection applications (excluding building water). It will be deducted from your final costs, but if you decide not to proceed with the connection, it will not be refunded.

There are four main elements to the new connection charge. Any additional costs will be quoted to you in advance of any work being carried out.

- infrastructure charge
- connection charge
- inspection charge
- building water

13.1 Infrastructure charge

For new properties, or properties that have not previously been connected to the network, you will be charged for each connection to the public water mains or sewerage network.

For commercial house developments and self-build houses, the infrastructure charge will be applied by Scottish Water; for non-household developments, the infrastructure charge will be applied by Business Stream as described below.

The infrastructure charge may also apply where a site is redeveloped, resulting in a greater demand for water from the site.

The standard charge applies to each property or sub unit. For example, a development incorporating a block of six offices units will be charged six infrastructure charges.

Water	£320.54
Sewerage	£320.54

This charge is payable in advance of the connection work taking place.

13.2 Connection charges

If your development includes business or industrial units, then Business Stream can arrange for new communication pipes to be connected to the existing network, or for an inspection to take place to ensure that your own connection work meets all relevant construction standards. Please note, the communication pipe is the pipe between the public main and the boundary of the road the main is in.

All connections to the public mains and sewerage network must be inspected; however, if your development is entirely domestic, then Scottish Water will provide these services for you directly.

If the communication pipe has a diameter no larger than 32mm, we will charge a fixed sum for the connection. An additional charge applies if a second 'manifold'

connection is required, and the work will be carried out at the same time as the first connection.

Scottish Water arranges for the labour and material needed to complete the pipe-laying work for the connection to the existing trunk main only. You will be responsible for:

- arranging all excavation work (or providing suitable ducts, or both)
- filling in and reinstating the footpath and road
- providing all materials, including a water toby (external stopcock) or meter chamber

If the communication pipe has an outside diameter larger than 32mm, the above still applies, but the charge will reflect the actual cost of the work carried out. You will be asked for an advanced payment based on an estimated cost of the work. If the actual cost is less, we will refund the difference; if the actual cost is more, you will be invoiced for the balance.

13.4 Inspection charges

If you or your contractor have made the water connection to a self lay main, constructed by agreement with us in accordance with Water for Scotland guidelines, we will charge an inspection fee to approve a water or sewerage.

Activity	Charge	Abortive visit charge
Inspection fee (water)	£49.73	Based on one hour 15 minutes
Inspection fee (sewerage)	£49.73	Based on one hour 15 minutes
Water connection (outside diameter up to 32mm and to a non-trunk main)	£299.04	Based on one hour 15 minutes
Other water connection	Based on actual cost	Based on one hour 15 minutes
Sewerage connection	Based on actual cost	Based on one hour 15 minutes

14 Building water

All building water requests that are not self-build houses should be directed to Business Stream and not Scottish Water, regardless of the type of property under construction. Customers requiring water for self-build houses should contact Scottish Water directly.

The charges will be zero rated for VAT purposes for all business customers, except those whose main business activity is within Divisions 1 to 5 of the 1980 Standard Industrial Classification. Where applicable, VAT will be added at the standard rate to the charges shown below.

14.1 Water for commercial house building

Water used in the commercial building of all new housing is charged at a fixed rate per property. The rate varies depending on the type of property being constructed, and is applied per property.

Flat	£102.22
Semi-detached house	£126.66
Detached house	£162.21

14.2 Water for business and industrial developments

For all other commercial building work, we base the charge on two components:

- a percentage of the estimated cost reported in planning permission applications and building warrant approvals. The total estimated cost is the total price of the contract less the value of any pre-mix concrete.
- the actual cost incurred by us for providing and removing the water supply

Construction type (based on construction costs)	Charge
All traditional work with a contract price of up to £500,000 (excluding costs of ready-mix concrete)	0.3% of the total estimated contract price
All traditional work with a contract price greater than £500,000 (excluding costs of ready-mix concrete)	0.3% for the first £500,000 of the total estimated contract price, 0.15% for the rest of the total estimated contract price
All non-traditional work, modernisation and cost, rehabilitation contracts (excluding costs of ready-mix concrete)	0.15% of the total estimated contract price
Additional charge for providing and removing the water supply	Based on actual cost

14.3 Site accommodation water

Water and/or waste water supply to site accommodation is un-metered; therefore, fixed and volumetric charges will apply in addition to any building water charges. Fixed charges will be based on the 20mm meter annual charge and the number of weeks the supply has been made available. Volumetric charges will be applied using the current metered volumetric charges and an assessment of the volume of water used.

The assessment of the volume of water and waste water used will be calculated using the following formulas:

Water: Number of people using site accommodation x Weeks onsite x PCC

Waste water: Number of people using site accommodation x Weeks onsite x PCC x 95%

PCC Per capita consumption for site accommodation charges will be based on the procedure for calculating volume at re-assessed un-metered premises.

Activity	Charge
Water fixed charge	£1.44 per week
Waste water fixed charge	£1.51 per week
Volumetric charges	Same as the current volumetric charges

15 Water bylaws inspections

If Scottish Water has found contraventions during a water bylaws inspection, a programme of works and timescale for completion will be agreed with you. If the programme and timescales are not adhered to, resulting in additional inspections by Scottish Water, additional charges will be applied.

Activity	Charge	Abortive visit charge
In hours repeat inspection	£81.65 per hour	£68.10
Out-of-hours repeat inspection	£109.20 per hour	£91.06
Inspection requiring additional resources (irrespective of time)	Reasonable costs incurred	Based on one hour 15 minutes

16 Other goods and services

The main services that Business Stream supplies are stated in this charging statement. Any other services will be provided at reasonable cost and these will be explained to you.

17 VAT

VAT is applicable on water charges for all business customers, except those whose main business activity is within divisions 1 to 5 of the 1980 Standard Industrial Classification (VAT does not apply to waste water or drainage charges). Full details of the Standard Industrial Classifications can be obtained from HMSO. Where applicable, VAT will be added at the standard rate to the charges shown.

The charges for all other services are also subject to VAT for all customers, regardless of their Standard Industrial Classification.

All other charges in this document are all zero rated for VAT. If you are in any doubt concerning the application of VAT, please contact us.

18 Recovery charges

As the leading water and waste water services provider in Scotland, Business Stream needs to ensure that it is providing value for money services to its customers. However, as highlighted in our terms and conditions of supply, this is a two-way relationship – in order to continue to provide services, we need our customers to send payment for the services they've received.

If this breaks down in any way, we have to take action. If we don't receive payment on time from you, we'll send you reminders to pay. If we still do not receive payment, we will issue a letter stating that we have applied a charge of £75+VAT to cover our costs of collection. We will inform you in advance if you risk incurring this charge.

To avoid running the risk of this charge being applied to your account, we recommend that you set up a direct debit. Not only do you receive a discount while on direct debit, but you will be safe in the knowledge that your bills are being taken care of and no collection charges will be applied while your direct debit is active. Please see section 3 for further information.

19 The Government exemption scheme

The exemption scheme is a Scottish Government policy that allows charities and volunteer organisations to apply for relief from their water, waste water and drainage charges.

Only properties with a 'net annual income' of less than £60,000 are eligible for the exemptions scheme. However, retail outlets or properties occupied by a local authority are not eligible, regardless of their income.

If granted an exemption, as long as your premises continue to be used for the same purpose within the approved guidelines, you will not need to pay water, waste water or surface water drainage charges at those premises until 31 March 2015 at the earliest.

Exempt properties will receive a zero bill from us each year. This enables us to verify that you are still in the property and that the contact details are correct. You can save paper by signing up for eBilling to receive all of your bills online. Visit www.business-stream.co.uk/eBilling for more details.

As of 1 April 2010, the eligibility criteria have been amended, so if you've applied in the past and been unsuccessful, you may want to reapply. The changes include the following:

- Any registered charity that's moved since 1 April 2006 and subsequently lost their exemption, can reapply.
- Any registered charity that received a permanent liquor licence from 1 September 2009 will, from 1 April 2010, be able to reapply for exemption. A registered charity that receives a permanent liquor licence from 1 April 2010 will continue to be eligible for exemption.
- The maximum income criteria has been increased from £50,000 to £60,000 as of 1 April 2010. It will increase by £1,500 each year thereafter.

If you think that you might be eligible for an exemption of this kind, you should contact our customer service team on 0845 602 8855 or at customer.service@business-stream.co.uk in the first instance for more guidance.

20 Your bills

Most customers with a water meter are billed quarterly for water and waste water services, based on alternating actual and estimated meter readings. If it's safe and practical for you to do so, you're always welcome to submit your own meter readings online at www.business-stream.co.uk/submitameterreading or by contacting our customer service team on 0845 602 8855 or at customer.service@business-stream.co.uk. By submitting your own meter reading, you're helping us ensure the accuracy of your bills.

Customers that meet certain criteria laid out in the market documents issued by the Water Industry Commission for Scotland qualify for monthly readings to be taken, and so will be billed monthly based on these readings.

Customers without a water meter will be billed annually for services for the year in advance. If you prefer to break your yearly bill up into more manageable payments throughout the year, you can sign up for monthly or quarterly direct debit payments (please see section 3 for more information).

As well as our standard paper bill, you can also sign up for online eBilling. eBilling saves paper by storing all of your bills online, and allows you to manage your account at your own convenience.

eBilling is particularly useful for our multi-site customers. You can consolidate your bills into a monthly, fully-itemised electronic statement, to see your balance and how much each site is using.

To sign up for eBilling, visit our website at www.business-stream.co.uk/eBilling

21 Payment options

We have a range of flexible payment options.

- Online: visit www.business-stream.co.uk/payonline, and you'll be able to pay your bill using a debit or credit card at any time that suits you.
- By direct debit: download a PDF of our direct debit mandate from our website, www.business-stream.co.uk, or call us 0845 602 8855. Since direct debit is quicker and easier for both you and us, we'll give you a small discount to say thank you.
- By phone: you can pay by credit or debit card by phoning 0845 602 8855.
- By cheque: please make cheques/postal orders payable to Business Stream and post them to Business Stream, PO Box 17381, Edinburgh EH12 1GT.
- By BACS: we bank with Bank of Scotland, The Mound, Edinburgh, EH1 1YZ. Sort code: 80-20-00, account number: 06070236, account name: Business Stream Revenue Account.

22 Contact information
